Digital public goods ecosystem
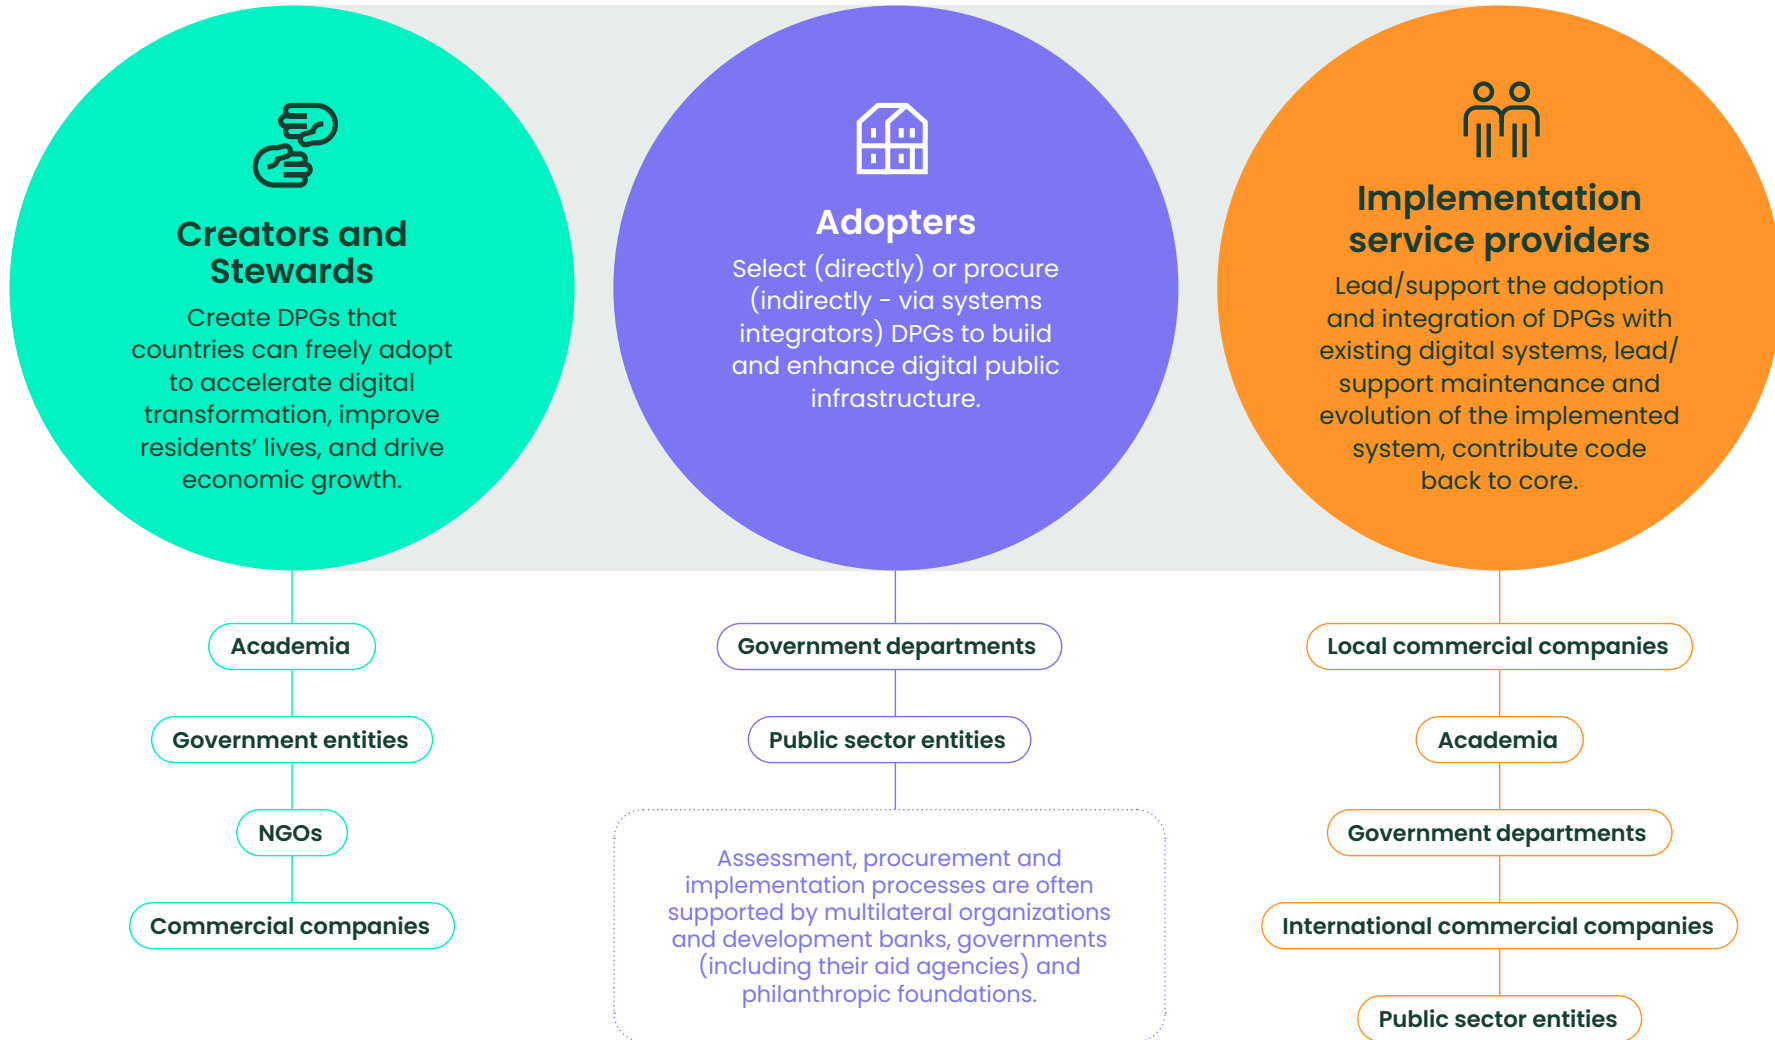

Stakeholders supporting the creation and implementation of DPGs for digital public infrastructure.

Creators and Stewards

Create DPGs that countries can freely adopt to accelerate digital transformation, improve residents' lives, and drive economic growth.

- Academia
- Government entities
- NGOs
- Commercial companies

Adopters

Select (directly) or procure (indirectly - via systems integrators) DPGs to build and enhance digital public infrastructure.

- Government departments
- Public sector entities

Assessment, procurement and implementation processes are often supported by multilateral organizations and development banks, governments (including their aid agencies) and philanthropic foundations.

Implementation service providers

Lead/support the adoption and integration of DPGs with existing digital systems, lead/support maintenance and evolution of the implemented system, contribute code back to core.

- Local commercial companies
- Academia
- Government departments
- International commercial companies
- Public sector entities

Funders provide grants and concessional financing to support different phases of DPG creation, procurement, and implementation, focused on the needs of countries that receive international development assistance.
